FOR IMMEDIATE RELEASE

Polar Communications to Provide Data Backup Services across the Nation

Park River, ND - March 6, 2008 - As the need for internet security grows for individuals, small businesses and corporations, Polar Communications, along with ten other independent telecommunication companies from across the country have formed a consortium, Bolt Data Systems, LLC, to provide data center services. Those services include network security, connectivity and support solutions for corporate, small business and residential data. The organization offers solutions to network security and data warehousing needs.

Besides Polar Communications, members of the newly formed company, headquartered in Indiana, include Broadband Cable Telecommunications, Inc, Oregon City, OR; Cameron Communications, LLC, Sulphur, LA; Central Indiana Communications, Maxwell, IN; Comtech Solutions, LLC, Golden, IL; Farmers Mutual Telephone Co, Nora Springs, IA; GVNW Consulting, Inc, Colorado Springs, CO; Indiana Fiber Network, LLC, Indianapolis, IN; Rock Port Telephone Co, Rock Port, MO; Tri-County Telephone Association, Basin, WY; and West Kentucky Rural Telephone Cooperative, Mayfield, KY.

No amount of data is too small to protect. A mother's pictures of her family are as valuable to her as a corporation's financial records are to it. The new consortium has services available to meet needs of any size. Contact information can be found at www.boltdatasystems.com or www.thinkpolar.com.
